John Sustituido

Overview

Developer with an eye for detail, creates user-friendly websites with design that's optimized across all devices. Skilled at maintaining web accessibility standards. Adept in collaborating with teams and being able to communicate the project's requirements and also making sure to be able to deploy projects on time. Improved search rankings and SEO of an e-commerce website.

Work Experience

Freelance Developer

Jun 2024 – Oct 2024

- Developed a website for a local cookies shop using WordPress as a content management system (CMS) to give the client an easy-to-use interface to update the website's content.
- Styled the website using Sass, and ensured it was responsive by designing mobile-first.
- Improved the customer's experience by adding clear calls to action to increase lead generation and ensured the website followed the Web Content Accessibility Guidelines to improve accessibility, thus elevating the client's provided website design.

Technical Projects

Patty Meltdown

April 2024 – March 2024

- Created a movie database utilizing React and Context to store state globally throughout the site.
- Allowed users to favourite movies to create their own personal collection by using localStorage.
- Integrated TMDB API using its token to fetch requests and dynamically generate content based on the different types of pages.
- Created a fully functional prototype of the database in collaboration.

GuMDrop

January 2024 – February 2024

- Collaborated and Communicated in a team setting to understand the project requirements and be able to deliver the project on time.
- Managed web hosting using cPanel, ensuring maintainability and access for the client
- Integrated WooCommerce to manage online transactions, streamline order processing, and handle inventory
